SUMMARY

Backend-leaning software engineer with 3+ years of professional experience building production web services: REST APIs, payment integrations, and MySQL/PostgreSQL data layers. Strong in PHP/Laravel and Node.js/Express, with hands-on WordPress/WooCommerce work and recent AI product engineering experience. Owns features end to end in fully remote, international teams (UK, Canada), writes clear async English, and ships to live, customer-facing sites. Looking for a mid-level remote backend role on a product team that ships continuously.

SKILLS

- **Backend:** PHP (Laravel), Node.js (Express), REST API design and integration, MVC, authentication (sessions, OAuth 2.0), payment integrations (webhooks, server-to-server calls)
- **Frontend:** JavaScript (ES6+), React, HTML5, CSS3, Bootstrap 5, responsive UI, cross-browser debugging
- **Databases:** MySQL (schema design, indexing, query optimization, migrations), PostgreSQL (Supabase)
- **CMS:** WordPress (custom theme and plugin modification), WooCommerce, Elementor, WPBakery, Gutenberg block edits
- **Tools and practices:** Git/GitHub, Docker, Postman, staging-to-production deploys, production bug triage, AI-assisted development workflows (Claude Code)
- **Environments:** Railway, Vercel, Render, WP Engine, cPanel/hosting stacks

PROFESSIONAL EXPERIENCE

AI Product Engineer Intern (Remote) — HNG Internship 15 **Sep 2026 – Present**

- Selected for a competitive engineering cohort building AI-powered product features with agentic coding tools in a Git-based workflow
- Shipped full-stack features end to end, including an e-commerce application (React, Node.js/Express, Supabase) and containerized PHP services (Docker, Render)
- Practiced structured engineering hygiene: PRD documentation, agent-context files (AGENTS.md), and deployment checklists

WordPress Web Developer (Remote, Contract) — The Canadian Association for Supported Employment (CASE) **Jan 2026 – Mar 2026**

- Maintained a live WordPress site serving an international organization, modifying themes and plugins to meet changing requirements
- Managed staging-to-production deployments via WP Engine with pre-release testing, keeping the live site stable through every change
- Resolved backend issues and adjusted WooCommerce configuration; handled ongoing maintenance requests

Backend Developer (Contract, Remote) — Artgidi **Sep 2024 – Nov 2025**

- Delivered backend fixes and features in PHP/Laravel on a production application, triaging and resolving bugs affecting performance and reliability
- Maintained and optimized MySQL queries and database structures as the application evolved
- Integrated third-party payment APIs (server-to-server calls, webhook handling, idempotent order flows)

Frontend & Backend Web Developer (Remote) — Mployus Group (UK & Ireland) **May 2024 – Nov 2024**

- Rebuilt frontend sections of an existing site from scratch to match client requirements, then wired them to a Laravel backend
- Supported live bug fixes and deployments on a customer-facing site
- Coordinated with stakeholders across time zones, turning feedback into technical action asynchronously

Frontend Web Developer (Remote) — AGROBOT **Nov 2023 – Jan 2024**

- Developed responsive web pages with HTML, CSS, and JavaScript; improved layout structure and usability

Backend Web Developer (Remote) — Pan Events **Aug 2023 – Oct 2023**

- Built backend features in PHP/Laravel; maintained and tuned MySQL structures and queries for reliable data flow

SELECTED PROJECTS

E-Commerce Platform (React, Node.js/Express, Supabase)

- Full-stack e-commerce site: catalog, cart, checkout and orders, Google OAuth sign-in, Mailgun transactional email, SQL schema, deployed on Vercel (live demo)

Laravel Booking System (Laravel, MySQL)

- Role-based booking platform with double-booking prevention enforced at the database layer (transactional locking and unique indexes); deployed on Railway

AI-Assisted Todo Application (PHP, JavaScript, Docker)

- Todo app with Pomodoro timer built with an agentic AI workflow (AGENTS.md context files), containerized with Docker and deployed on Render

Orb Temple (JavaScript, Three.js)

- 3D endless runner game built for start.ng, running entirely in the browser with no game engine
